Our Quality Policy

The Management is aware that the market and the society show increasing demands for quality, performance and responsibility for products and all aspects of company management. These needs require to continuously pursue general goals like:

- High technical quality of molds and of each single component focusing to prevent problems and defects of the product;
- Obtain the quality and conformity of the work ensuring the productivity of the processes;
- Data recording as a proof of the reached quality step by step;
- Cooperate with the whole staff for the best use of the company materials and to obtain the established productions maintaining and improving quality standards;
- Select and choose the best qualified and suitable suppliers to support with quality and punctuality the internal productions;
- Dispose of an activity and quality control system suitable for the structures and the type of production
- Respect the laws in force with a special focus on safety of workers, environmental protection, quality and conformity of products and activities

Gamma Stampi plans and builds mold for the deburring and cutting of rubber products. Customers expect dimensionally perfect molds with performance and duration within the established standards. These results are reached through: plans developed in a correct and complete way, best suitable materials and components worked with hi-tech machines and tools in a process where all the staff does his best to satisfy the customers' needs.

The Management intends to develop the company's wealth of knowledge, equipment and skills and to improve / optimize aspects such as:

- Growth of design and production operational capabilities through the update of machines and computerization of processes;
- Simplify and Maintain the Quality Management System according to the new ISO 9001:2026. Maintain the binding laws regarding Environment, Health and Safety on work;
- Attention to Cyber Security with concrete actions on the business information system;
- Educate, motivate and raise awareness of the staff about the Quality Management System and continuous improvement.

The Management looks confidently to the future of the company if it will be able to maintain a high level of customer satisfaction.
